## Personal Details

I believe that every patient with surgical problems should experience a patient experience at high human and scientific standards during the period from the initial meeting and evaluation in the clinic or emergency department to the necessary surgical interventions and postoperative follow-ups.

I think that this can only be possible with decisions and behaviors that will be made by considering the values of quality, ethics, evidence-based medicine, human understanding, patient care and patient satisfaction. I think that this can only be possible with decisions and behaviors that will be made by considering the values of quality, ethics, evidence-based medicine, human understanding, patient care and patient satisfaction.

I think that I will be able to communicate in a quality and synergy manner not only with patients and their relatives, but also with my colleagues and auxiliary staff at the hospital I am a part of, and I will make an effort so that everyone around me learns something new, develops and does their job with pleasure, within the limits of my knowledge and abilities.

I also want to continue to add value to the team that I will be a part of and to be a part of, by constantly improving myself on new surgical techniques and technologies.

I would love to be able to talk face to face about how I can be helpful and add value to you,

Best Regards,

Sarp Kaya Görür, M.D.
